

Restriction of Hazardous Substances (RoHS) Statement

Directive 2002/95/EC (27 January 2003) on the Restriction of the Use of Certain Hazardous Substances in Electrical and Electronic Equipment (RoHS) restricts the use of lead, mercury, cadmium, hexavalent chromium and two bromine-containing flame-retardants PBB and PBDE in electrical and electronic products within the European Union (EU).

Plasmon understands the environmental risks associated with the substances covered by the RoHS directive and is committed to reducing the use of these as well as other environmentally sensitive substances, in our products. Plasmon has undertaken a significant redesign effort to comply with the RoHS Directive requirements prior to the 1st July 2006 EU implementation deadline and will continue to incorporate these changes in all on-going product development.

Plasmon can confirm that all UDO1 and UDO2 Drives, UDO1 and UDO2 G-Series libraries and new UDO Archive Appliance (with UDO1 and UDO2) solutions sold within the European Union will comply to the RoHS Directive. All new solutions introduced after 1st July 2006 will also be RoHS Compliant.

RoHS Declarations for each product sold by Plasmon after 1st July 2006 are available from our website <http://www.plasmontech.com/customer/index.html>
